Professional Summary: React Full Stack Developer with 3 years of experience in building scalable and high-performance web applications using React.js, JavaScript (ES6+), TypeScript (Working Knowledge), Java, Spring Boot, and PostgreSQL. Experienced in developing end-to-end applications including responsive front-end interfaces, REST APIs, authentication systems, database integration, and production support. Skilled in React Hooks, Redux, React Router, JWT authentication, role-based access control, API integration, performance optimization, and debugging production issues. Hands-on experience in developing and deploying full-stack applications such as BOM (Bill of Materials) and Vendor Management Systems using modern development practices, Git workflows, CI/CD pipelines, and Jira-based project tracking. Strong understanding of reusable component architecture, clean coding standards, and scalable application development.

WORK EXPERIENCE

TECHNOBOOST Services, Bengaluru, India

Feb 2023– Present

React Full Stack Developer

- Developed and maintained scalable full-stack web applications using React.js, JavaScript, Java Spring Boot, PostgreSQL, and REST APIs.
- Built and deployed 15+ responsive and production-ready applications with reusable React components, modular architecture, and optimized UI performance.
- Developed secure REST APIs using Spring Boot with CRUD operations, JWT-based authentication, request validation, exception handling, and database integration.
- Designed and integrated PostgreSQL database schemas, queries, and API data flows for enterprise applications.
- Developed two end-to-end full-stack applications including BOM (Bill of Materials) and Vendor Management System (VMS), each consisting of 20–30 APIs and live production deployments.
- Implemented role-based access control, protected routes, and token-based authentication for secure application access.
- Built dynamic and interactive user interfaces using React Hooks, React Router, Context API, Redux, and asynchronous API handling.
- Worked on performance optimization techniques including lazy loading, code splitting, debouncing, asset optimization, and Lighthouse performance improvements.
- Used React Hook Form for scalable form handling and validation workflows.
- Collaborated with backend, QA, and business teams to gather requirements, resolve production issues, and deliver iterative enhancements.
- Participated in code reviews, debugging, root-cause analysis, and live production support activities to improve application reliability and maintainability.
- Worked with Jira, Git, GitHub/GitLab, and CI/CD pipelines to support agile-based development and deployment workflows.
- Followed clean coding practices, reusable architecture principles, and documentation standards to improve maintainability and development efficiency.
- Assisted in troubleshooting production bugs, monitoring application behaviour, and implementing fixes with minimal downtime.
- Mentored junior developers through technical guidance, debugging support, and code review sessions.
- Leveraged AI-assisted development tools such as GitHub Co-pilot and Claude to accelerate development, refactoring, debugging, and API integration workflows.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), HTML5, CSS3, SQL (Basic), Python (Basic)
- **Front-End:** React.js, Hooks, Redux, Context API, Bootstrap, Tailwind CSS, jQuery
- **APIs & Data:** REST APIs, Axios, Fetch API, JSON, Async/Await
- **Performance:** Code Splitting, Lazy Loading, Lighthouse Optimization, Asset Optimization
- **CI/CD & Tools:** Git, GitHub/GitLab, CI/CD Basics, Docker (Basic), VS Code, Figma, Postman
- **Concepts:** Responsive Design, Component-Based Architecture, State Management, SPA Development, API Integration

PROJECTS

SmartMinutes | Web Application

Tech Stack: React.js, JavaScript, Tailwind CSS, REST APIs

- Developed a React-based meeting intelligence application that converts meeting transcripts into structured summaries and actionable insights.
- Integrated with Smartsheet for automated data population
- Auto-generates shareable email summaries to accelerate communication
- Supports client calls, reviews, and internal meetings
- Implemented dynamic state handling and asynchronous API communication using React Hooks and Axios.

Ditos | Web Application

Tech Stack: : React.js, JavaScript, Tailwind CSS, REST APIs

- Built scalable inventory management system using React.js with real-time stock monitoring features.
- Implemented automated purchase order generation and vendor coordination
- Developed an integrated CRM module with customer insights and loyalty workflows
- Created a multi-store dashboard with centralized analytics and reporting
- Enabled end-to-end digitization of billing and store operations

BOM (Bill of Materials) | Full Stack Web Application

Tech Stack: : React.js, Java Spring Boot, PostgreSQL, REST APIs, JWT Authentication

- Developed a full-stack BOM management application for handling raw materials, product structures, and inventory workflows.
- Built secure REST APIs using Spring Boot with JWT-based authentication and role-based authorization.
- Designed responsive front-end interfaces using React.js with reusable component architecture and protected routing.
- Integrated PostgreSQL database for product, vendor, and inventory management workflows.
- Implemented CRUD operations, validations, exception handling, and API integration for seamless business operations.
- Developed and deployed 20+ APIs supporting material tracking, reporting, and operational workflows.

Vendor Management System (VMS) | Full Stack Web Application

Tech Stack: : React.js, Java Spring Boot, PostgreSQL, REST APIs, JWT Authentication

- Built a full-stack vendor management platform for vendor onboarding, purchase workflows, and operational tracking.
- Developed scalable REST APIs and integrated PostgreSQL database operations using Spring Boot and Maven.
- Implemented secure login authentication using JWT token validation and role-based access management.
- Built dynamic dashboards, forms, and reporting modules using React.js, React Router, and modern UI practices.
- Worked on production deployment, debugging, performance optimization, and live issue resolution.
